FOR IMMEDIATE RELEASE:

**JENN-AIR RAISES PERFORMANCE STANDARDS  
WITH TRIFECTA<sup>®</sup> DISHWASHERS**

BENTON HARBOR, MI (December 2, 2009) – The new Trifecta dishwashers from Jenn-Air, part of an all-new collection of luxury appliances that includes advanced wall ovens, cooktops, refrigerators and ventilation systems, not only promise exceptional cleaning performance, quiet operation, and reduced water and energy use, but a number of added features designed with entertaining in mind.

“Like all of the appliances in our new collection, our latest dishwashers reflect the brand’s shift into the super-premium appliance category,” notes Juliet Johnson, manager of Jenn-Air<sup>®</sup> brand experience. “In addition to providing a level of performance far beyond anything Jenn-Air has ever offered, they include a number of special cycles tailor made for keeping things running smoothly when entertaining.”

These new cycles include a One Hour Wash option that allows for the quick cleaning of dishes before guests arrive, and a Plate Warmer cycle that ensure hot plates to help keep food warm before guests begin dining. A China/Crystal cycle delivers a lower pressure wash spray to gently wash china and crystal, while a SteamClean option for stemware yields brilliant results. A Top Rack Only option on select models concentrates cleaning power to the top rack by using the top spray arm, resulting in a shorter cycle that can quickly washes glasses over the course of a wine tasting or dinner party. The same cycle can also be used to clean half loads of several different types of dishes. including standard size dinner plates.

Beyond its Normal Wash and Heavy Wash cycles, the dishwashers feature a Sensor Wash option that gauges load size and food particle levels, adjusting wash cycles accordingly. While all cycles utilize a ClearScan Turbidity Sensor to determine particle levels to manage energy and water use, the Sensor Wash cycle uses both the ClearScan Turbidity Sensor and a temperature sensor to determine load size for a customized level of cleaning performance on every load.

Other features include a stainless steel tall tub, dual wash zones that concentrate cleaning power by alternating washing action between top and bottom racks, and a variable speed motor that adjusts to save energy and reduce noise. For more effective cleaning with less water use, the Trifecta® dishwasher utilizes pressure enhancing wash arms with narrow spray jets that concentrate water flow to accelerate the water's force. A dual wattage heating element offers the choice of high-performance fast drying when needed, and also provides the necessary power to heat water to the required temperature for a Sanitize option. It operates at sound levels ranging from 48 to 42 dBA, less than half the perceived level of casual conversation.

A specially designed three-stage filtration system features a filter plate, a coarse filter cup filter and a microfine filter created to optimize water flow and minimize food particles that can be left inside the filter or redeposited on dishes. Rather than utilizing a screened bottom, the thoughtfully designed filter cup is bottomless and sealed directly to the dishwasher drain, allowing particles that are captured in the cup to be washed out of the system. The innovative filter design also makes it easier to maintain, with fewer manual cleanings required.

“Anyone who frequently cleans their dishwasher filter will appreciate the advances offered in our new low-maintenance, three-stage filtration system,” says Johnson. “Not only does the system optimize the flow of water, it also minimizes the amount of particles left in the filter and water, thereby reducing the frequency of cleaning.”

Designed to maximize loading flexibility, the dishwashers feature an adjustable upper rack that is easily removed to accommodate very tall items from lobster pots to long vases. Other conveniences include cup shelves with integrated stemware holders; a lower rack with a Split & Fit™ silverware basket that can be split and placed to fit around the dishwasher load; light item clips for small, lightweight items; and onyx black racks with fold down tines and shelves.

DISHWASHERS/Page 3**

Style choices for the new dishwashers include the commercial look of Pro-Style® in stainless steel and the sleek, refined Euro-Style options available in Oiled Bronze, black and white Floating Glass and stainless steel.

Since the introduction of the first self-ventilated cooktop in 1961 and downdraft ventilated range in 1965, Jenn-Air has consistently grown its reputation as a technology and design innovator. Its selection of style options includes two distinct stainless steel collections and two cutting edge finishes: Floating Glass and Oiled Bronze. From downdraft cooktops, wall ovens and professional-style ranges to dishwashers, refrigerators and such entertaining essentials as warming drawers, built-in ice machines and wine cellars, Jenn-Air offers a complete line of major kitchen appliances.
